**1st Arab Teleneurology Conference**  
A Treat and Teach Initiative

## Welcome

On behalf of the Organizing Committee it is our great pleasure to invite you to join the *First Arab Teleneurology Conference: A Treat and Teach initiative*.

This conference will take place in the Arab League office located in the famous Tahrir square, next to the Nile shores in the legendary Cairo city. A city that has an enormous cultural heritage, and represents a modern cosmopolitan regional political, economic, and cultural center.

This meeting is the first of its kind, at the regional level that discusses the problems of neurology education and practice in the Arab world and its neighboring African countries. It also presents a novel initiative aiming at using modern communication technologies to facilitate networking between regional and international centers of excellence on one hand and scholars and patients on the other.

## Vision

We are trying to complement the current efforts to improve neurology education and practice in Egypt, the Arab world, and Africa with a 'Treat and Teach' initiative that has a mix of online education and onsite medical services. This would hopefully, lead to national neuroscience services run by local HR.

## Topics

- Telemedicine applications in the developing world; opportunities and challenges
- Methods of implementation
- Cultural and legal barriers
- Current problems with neurology education and practice in the developing world
- How to integrate e-learning in the current neurology education systems
- Previous experiences and current initiatives

**1st Arab Teleneurology Conference**  
A Treat and Teach Initiative
